

After much reading and review of the proposed Broadband over Powerline (BPL) services to be considered, I wish to express that as an Amateur Radio operator that I have spend many hours in testing and problem resolution as to noise sources, and A/C power offer a host of noise sources. With BPL being considered, this will allow noise pollution to be spread all through the RF spectrum where voice communications will not be possible in areas of BPL service. I wish to express my comments as to this service not being approved by the FCC as it will be a mJOR noise pollution source and also a major blow to ham radio communications and continued growth.

Thank you
